New video captures perspectives on national transportation challenges

Here's a staggering bit of information:

According to ASCE's 2005 assessment of national infrastructure, \$1.6 trillion is needed in the next five years to bring the nation's infrastructure to good condition.

A video recently released by AASHTO presents the challenges facing U.S. transportation infrastructure in the next 50 years, with perspectives from transportation leaders and experts.

The brief presentation discusses the trends, as well as possible solutions, dictating the need for a strong, reliable infrastructure system to support future intermodal needs, www.youtube.com/user/aashtovideo. ■
